

KEY FEATURES AND FUNCTIONS*One Agent, One Platform, One Global IT Power Management Solution*

BigFix Power Management adds real-time visibility and control of desktop, laptop, and peripheral power consumption to the array of BigFix security and configuration management services. Consisting of a BigFix Policy Message (Fixlet®) library accessed through the BigFix Console, administrators can enforce power management policies on PCs any time, any where. Leveraging unique BigFix Distributed Wake-on-LAN functions, BigFix Power Management enables users to optimize operational efficiencies by synchronizing power conservation with other IT security and system management processes.

THE BIG GREEN BUTTON FOR COST SAVINGS AND GLOBAL GOODNESS

SAVE \$10-\$50 PER COMPUTER PER YEAR IN LOWER ELECTRIC BILLS

FEATURES

- Dedicated BigFix Fixlet message library for real-time monitoring, reporting, and managing of power consumption on all Windows computers
- Visualize and report energy efficiencies and savings achieved through BigFix Power Management
- Non-stop management of security and configuration policy enforcement plus energy saving through the unique BigFix Distributed Wake-on-LAN technology
- Consolidates computer energy consumption control with other management and security functions under the unified BigFix Console

Full Spectrum of Power Management and Reporting Functions

- Lightweight, customizable BigFix Policy Message (Fixlet) library to monitor, report, and control power consumption of BigFix-managed Windows computers
- Options to power down entire computers, subsystems, or invoke sleep modes
- Distributed Wake-on-LAN to synchronize power savings with other system maintenance and management processes
- Set power savings for individuals, groups, divisions, enterprises using BigFix Baseline and Group functions

Graphical Power Tracking Dashboard

- View power management status and tool controls
- Power cost reduction analysis for real-time and historical views of power consumption status and trends
- Power consumption monitoring including a unique BigFix Power Spectrum™ visualization tool
- Single-click access to main power management controls including remote shut down, restart, and waking
- Power Profile Wizard to quickly create and implement power management policies

Multi-Function Power Management Dashboard

- Turn off computers
- Restart computers
- Turn monitors off and on
- Turn hard drives off and on
- Invoke sleep and hibernation modes
- Power-on using Wake-on-LAN
- Set power settings and policies for groups and categories of managed clients
- Override end-user settings that vary from organizational policy

BENEFITS

- Save \$10-\$50 per-device per-year depending on energy management policies, device power consumption and cost of power
- Annual upside savings can exceed costs of a license for an entire array of BigFix-based security configuration management services
- Greenhouse gas and power consumption reporting for compliance with government power conservation guidelines, tax incentives, and carbon trading markets
- High-impact addition to any corporate environmental stewardship initiative
- Override individual user preferences that conflict with conservation goals
- Increase operational efficiency by synchronizing power management with maintenance and update schedules

Need-to-Know Statistics and Reports

- Communicate value to senior management and the enterprise at large
- Power Savings Calculators project dollar value of power savings enabled through use of BigFix Power Management-based energy conservation programs
- Carbon Savings Calculators project carbon load reductions based on widely accepted algorithms, constants, and assumptions
- BigFix Power Spectrum, a unique power consumption visualization tool
- Aggregate Management Statistics provide an overview of power usage, including the number of computers powered on for a given time interval
- General Management Statistics provide more fine-grained analysis of BigFix Power Management including number of monitored computers, average individual computer power-on time per day, average group/departmental/ enterprise computer power-on time per day, average time between restarts, and total power-on time
- Custom Management Statistics, power-on usage statistics based on administrator-specified time intervals

BigFix Exclusive: Distributed Wake-On LAN

- Overcomes long-standing wake-on-LAN limitation—can wake up or turn off computers on more than one subnet
- Synchronize power conservation with maintenance and management cycles
- BigFix Wake-on-LAN Wizard to quickly set up and implement policies to wake up computers in specified subnets

Platform Availability

The BigFix Power Management Fixlet library is currently available for computers running Microsoft Windows 2000, XP, and 2000 Server.

BigFix: Breakthrough Technology, Revolutionary Economics

BigFix, Inc. offers the IT industry's only intelligent enforcement engine that enables real-time visibility and control of globally distributed desktop, mobile and server computer infrastructures. Built on a revolutionary technology platform, BigFix continually assesses and manages the health and security of enterprise computing devices at the velocity of change. Without requiring massive investment in dedicated management resources, BigFix automates enterprise-scale malware defense, IT security policy compliance, and desktop and server management.

BigFix delivers outstanding return-on-investment through slashing IT infrastructure costs of ownership and management complexity while enabling IT organizations to elevate security configuration management from chronic pain point to positive business value resource.
